# LipSync Hub Modular Mounting System
USER QUICK GUIDE

Introduction

The LipSync Hub Modular Mounting System is a stand for the LipSync Hub that allows the height and angle of the Hub to be set independently of each other. The base version has a base, an arm, and a hub adaptor, but it is possible to add multiple arms, or different bases to suit different needs. It is a derivative of the Modular Mounting System on Thingiverse.

Features

LipSync Hub Modular Mounting System
USER QUICK GUIDE

Usage

To adjust the angle and height of the stand, loosen the knobs or nuts on the joints of the stand. The stand can then be posed to the desired position, and the knobs tightened to lock the joints in place.

Compatibility

Hardware: The system is designed for use with commercial ¼-20 hardware, but it will also work with 3D printed ¼-20 hardware, as well as commercial M5 and M6 hardware.

Parts: The LipSync Hub Modular Mounting System is a derivative of the Modular Mounting System by HeyVye on thingiverse.com. The LipSync Hub Modular mounting system is backwards compatible with the original, but only when using M5 hardware, as that is the only hardware that works with the original system.

Specifications

Base Diameter: 15 cm

Maximum Height: 20 cm

Weight: 41 g

Cleaning

The Modular Mounting System can be wiped clean with a damp cloth.
